Salmonella and *Listeria monocytogenes* can affect animals eating the products and there is risk to humans from handling contaminated pet products, especially if they have not thoroughly washed their hands after having contact with the products or any surfaces exposed to these products.

Healthy people infected with *Salmonella* and *Listeria monocytogenes* should monitor themselves for some or all of the following symptoms: nausea, vomiting, diarrhea or bloody diarrhea, abdominal cramping and fever. Rarely, *Salmonella* and *Listeria monocytogenes* can result in more serious ailments, including arterial infections, endocarditis, arthritis, muscle pain, eye irritation, and urinary tract symptoms. Consumers exhibiting these signs after having contact with this product should contact their healthcare providers.

Pets with *Salmonella* and *Listeria monocytogenes* infections may be lethargic and have diarrhea or bloody diarrhea, fever, and vomiting. If your pet has consumed the recalled product and has these symptoms, please contact your veterinarian.
